## **ABC of HIV and AIDS**

“A practical, highly informative, and sympathetic guide.” —The Washington Post Most of us will become a caregiver at some point in our lives. And we will assume this role for the most personal reason imaginable: wanting to help someone we love. But we may not know where to start, and we may be afraid of losing ourselves in this daunting task. Former first lady Rosalynn Carter, a longtime advocate for caregivers and mental health, knows firsthand the challenges of this labor of love. Drawing upon her own experiences and those of hundreds of others whose stories she gathered over many decades, Mrs. Carter offers reassuring, practical advice to any caregiver who has faced stress, anxiety, or loneliness. *Helping Yourself Help Others*, reissued here with a new foreword, is as relevant as ever. Long before the COVID-19 pandemic inspired national conversations about the vast undervaluing of unpaid caregiving, the dangers of burnout, and the merits of self-care for relief, Rosalynn Carter was shining a light on these matters and everything else that caregivers confront. Filled with empathy, this encouraging guide will help you meet a difficult challenge head-on and find fulfillment and empowerment in your caregiving role.

Wright respond to questions about the gynecological issues that concern women today, including sexual activity, contraception, and family planning. Readers of *The Yale Guide to Women's Reproductive Health* will learn how the female body works, what problems may arise, and what solutions are available—in short, they will become better prepared to participate in their own health care and to make healthy decisions.

## **The Johns Hopkins Hospital 2004-5 Guide to Medical Care of Patients with HIV Infection**

These consolidated guidelines on HIV prevention, testing, treatment, service delivery and monitoring bring together existing and new clinical and programmatic recommendations across different ages, populations and settings, bringing together all relevant WHO guidance on HIV produced since 2016. It serves as an update to the previous edition of the consolidated guidelines on HIV. These guidelines continue to be structured along the continuum of HIV care. Information on new combination prevention approaches, HIV testing, ARV regimens and treatment monitoring are included. There is a new chapter on advanced HIV disease that integrates updated guidance on the management of important HIV comorbidities, including cryptococcal disease, histoplasmosis and tuberculosis. The chapter on general HIV care, contains a new section on palliative care and pain management, and up to date information on treatment of several neglected tropical diseases, such as visceral leishmaniasis and Buruli ulcer. New recommendations for screening and treating of cervical pre-cancer lesions in women living with HIV are also addressed in this chapter. Guidance on service delivery was expanded to help the implementation and strengthening the HIV care cascade. Importantly, this guidance emphasizes the need for differentiated approaches to care for people who are established on ART,

such as reduced frequency of clinic visits, use of multi-month drug dispensing and implementation of community ART distribution. The adoption of these efficiencies is essential to improve the quality of care of people receiving treatment and reduce the burden on health facilities, particularly in resource limited settings.
