## **Two Or More Sample Hypothesis Testing Paper Introduction**

Student's t-test [x] A one-sample Student's t-test is a location test of whether the mean of a population has a value specified in a null hypothesis. In testing the null... Chi-squared test [x]chi-squared test (also chi-square or ?2 test) is a statistical hypothesis test used in the analysis of contingency tables when the sample sizes are large... Kolmogorov-Smirnov test [x]be used to test whether a sample came from a given reference probability distribution (one-sample K-S test), or to test whether two samples came from the... Null hypothesis [x]the null hypothesis is the alternative hypothesis. Symbols may include H1 and Ha. A statistical significance test starts with a random sample from a population... A/B testing [x]application of statistical hypothesis testing or "two-sample hypothesis testing" as used in the field of statistics. A/B testing is a way to compare multiple... Statistical hypothesis test [x]rigor and methods to obtain more results from many samples and a wider range of distributions. Modern hypothesis testing is an inconsistent hybrid of... Wilcoxon signed-rank test [x]test is a non-parametric rank test for statistical hypothesis testing used either to test the location of a population based on a sample of data, or to... Mann–Whitney U test [x]test involves the calculation of a statistic, usually called U, whose distribution under the null hypothesis is known: In the case of small samples,... Kruskal-Wallis test [x]statistical test for testing whether samples originate from the same distribution. It is used for comparing two or more independent samples of equal or different... Statistical significance (redirect from Statistical significance (hypothesis testing)) [x]statistical hypothesis testing, a result has statistical significance when a result at least as "extreme" would be very infrequent if the null hypothesis were... Type I and type II errors (category Statistical hypothesis testing) [x]statistical hypothesis testing, a type I error, or a false positive, is the rejection of the null hypothesis when it is actually true. A type II error, or a false... Efficient-market hypothesis [x]The efficient-market hypothesis (EMH) is a hypothesis in financial economics that states that asset prices reflect all available information. A direct... Score test [x]null hypothesis is true, the likelihood ratio test, the Wald test, and the Score test are asymptotically equivalent tests of hypotheses. When testing nested... Simulation hypothesis [x]experimentally confirmed. A method to test one type of simulation hypothesis was proposed in 2012 in a joint paper by physicists Silas R. Beane from the... Replication crisis (section Problem with null hypothesis testing) [x]finding or hypothesis is tested using a different procedure. Conceptual replication allows testing for generalizability and veracity of a result or hypothesis... Odds ratio (redirect from Sample odds ratio) [x] odds ratio) [x] by testing the null hypothesis that ? = 0.5 {\displaystyle \pi =0.5}. This is done using McNemar's test. There are a number of ways... T-statistic [x]used in hypothesis testing via Student's t-test. The t-statistic is used in a t-test to determine whether to support or reject the null hypothesis. It is... ABX test [x]unconscious influence from the researcher or the test supervisor. Because samples A and B are provided just prior to sample X, the difference does not have to... Statistics (redirect from R-test) [x] leading to a test of the relationship between two statistical data sets, or a data set and synthetic data drawn from an idealized model. A hypothesis is proposed... Logrank test [x]The logrank test, or log-rank test, is a hypothesis test to compare the survival distributions of two samples. It is a nonparametric test and appropriate... botany for dummies
